January 2021 Investment Commentary

Pandemic: The end of the beginning? Following vaccine success announcements from November 2020 there has been recovery in the value of UK shares and other assets. Ongoing volatility is expected as a result of the new variant, new lockdowns, and until the vaccine is rolled out fully. Whilst Government support is helpful, the effect is already fading in some regions and may serve to restrain spending in the recovery. **As a result, economic improvement is likely to be gradual and stop-start.** However, central bank global asset purchases support real assets such as shares and property, whilst keeping bond yields low (and capital values high) even if the cash saver sees historically low interest rates. Further, the agreement of a trade deal between the UK and EU removes one uncertainty from domestic finances.

Why most people do not need to take action:

Time in the market, rather than timing the market, is often the key to successful long-term investing. **If you sell today, then when do you buy back?** We believe investments should be held for the medium to long-term. Portfolios are generally spread and so not overexposed to one asset class and this means you are highly unlikely to be fully invested in shares. Whilst natural diversification has been less effective than expected owing to the nature of the pandemic, **headline media falls are very unlikely to be the falls experienced within your portfolio.**

If you remain a medium to long term investor, whose attitude to risk and circumstances have not changed **it is not advisable generally to alter a diversified portfolio because of short term volatility:**

- Fidelity International published data on returns from the FTSE All Share from **the beginning of 2005 to the end of 2019**, which shows the effect of short term volatility. The effect of missing out on the **ten best days** in the market is that **returns are cut from 7.6% per annum to 3.3% per annum**. Missing the best thirty days makes returns negative at -1.3%.
- Therefore, consistently timing the market whether out or in is incredibly difficult. Nobel Laureate William Sharpe found that 'market timers' must be right **82%** of the time to match the return realised by long term investors.
- This underpins our belief that investments should be held for the medium to long-term. Since 1899 the UK stockmarket has outperformed cash in around 75% of five year periods and around 90% of ten year periods.

Who needs to take action, and if so, what action:

- **Investment risk** refers to the range of possible returns, with the greater risk taken leading to the greater range of returns both positive and negative. If you feel your risk tolerance might have changed, or you want us to check the ongoing suitability of the portfolio based on your risk tolerance, please ask us for a **fresh Risk Profile Questionnaire**.
- **If you a short-term investor**, which means you are **approaching taking benefits from your pension in 2021, or have a known or emerging need to take a capital withdrawal** from your portfolio, you need to contact us so we can assess your options.
- If you take **fixed regular withdrawals** from your pension or investments, sharp market movements are to be avoided and it is necessary to review the ongoing sustainability of these payments. **If you are spending less, then withdrawal reductions might be affordable.**

- Whilst it is important to keep a buffer of six to twelve months of outgoings in cash deposits, **cash interest rates have decreased sharply**. Your options need to be reviewed.

Biden's victory in November 2020's Presidential election removes the risk of incendiary Trump tweets causing market convulsions and might lead to a more neutral US approach until 2024. Like the Bank of England, the US Federal Reserve has slashed US interest rates in response to the pandemic and re-ignited Quantitative Easing.

In light of the pandemic mitigation steps imposed by its Government, the Official Chinese Purchase Managers Index (PMI) plummeted in February 2020 only, indicating economic contraction but has since returned to expansion supported by its domestic market, indicating that economic recovery can happen quickly with appropriate measures. Deleveraging and dealing with bad debt continues to be required, as does an easing of tensions in Hong Kong.

Index / Asset Class	Return Period	Change
FTSE 100 (UK shares)	Year to 31 December 2020	-14.3%
FTSE 100	Rise from post financial crisis trough (6 March 2009)	84.3%
FTSE 100	Fall from most recent peak (22 May 2018)	-18.0%
S&P 500 (US shares)	Year to 31 December 2020	15.8%
Nikkei 225 (Japanese shares)	Year to 31 December 2020	17.7%
Hang Seng (Hong Kong shares)	Year to 31 December 2020	-3.6%
UK CPI (inflation)	Year to 30 November 2020	0.3%
UK GDP (economic growth)	Q3 2020	16.0%
UK 10 year Gilt	Yield change year to 31 December 2020	-79.8%*
UK 10 year Gilt	Yield change month to 31 December 2020	-45.2%*
Residential Property (Nationwide House Price Index)	Year to December 2020	7.3%
Residential Property (Nationwide House Price Index)	Rise from pre financial crisis peak October 2007	24.1%
Gold	Year to 31 December 2020	32.1%

*A decrease in yield means a rise in capital.

Issued: 4 January 2021. Expires: 31 January 2021.
