July 2019 Investment Commentary

2018 was a volatile year, the final quarter particularly so. Whilst the UK's ongoing political uncertainty is an easy target for blame, markets have been led by macroeconomic conditions in the USA. Donald Trump's loose fiscal policy, which has resulted in increased US Government Debt at a time of solid economic growth, was expected to cause US interest rates to continue to rise. However, the US Federal Reserve has indicated that no further US interest rate rises are expected in 2019. This may aid corporate profits, supporting share prices but ongoing US-China trade negotiations are a material uncertainty. However, balance sheet normalisation, known as Quantitative Tightening means that monetary tightening is continuing. Ten of the last thirteen rate rise cycles have ended in a US recession.

The Bank of England still expects there to be further gentle interest rate rises over time after August 2018's increase to 0.75%. Nevertheless, interest rates for savers remain lower than UK inflation.

Index / Asset Class	Return Period	Change
FTSE 100 (UK shares)	Year to 30 June 2019	-2.7%
<p style="text-align: right; font-size: small;">SOURCE: TRADINGECONOMICS.COM OTC/CFD</p>		
FTSE 100	Rise from post financial crisis trough (6 March 2009)	112%
FTSE 100	Fall from most recent peak (22 May 2018)	-5.6%
S&P 500 (US shares)	Year to 30 June 2019	8.8%
Nikkei 225 (Japanese shares)	Year to 30 June 2019	-4.4%
Hang Seng (Hong Kong shares)	Year to 30 June 2019	-0.3%
UK CPI (inflation)	Year to May 2019	2.0%
UK GDP (economic growth)	Q1 2019	0.5%
UK 10 year Gilt	Yield change year to 30 June 2019	-34.9%*
UK 10 year Gilt	Yield change month to 30 June 2019	-7.9%*
Commercial Property	Year to 31 May 2019	4.6%

(IPD UK Monthly Property Index)		
Commercial Property (IPD UK Monthly Property Index)	Rise since pre financial crisis peak June 2007	69.4%
Residential Property (Nationwide House Price Index)	Year to May 2019	0.6%
Residential Property (Nationwide House Price Index)	Rise from pre financial crisis peak October 2007	15.5%
Gold	Fall from peak September 2011 to 30 June 2019	-27.0%

China: The Official Chinese Purchase Managers Index (PMI) has contracted since May 2019 arising from falling export orders resulting from tariffs. Deleveraging and dealing with bad debt continues to be required.

Eurozone: The European Central Bank continues to provide support, although its version of Quantitative Easing finished at the end of 2018. There will be a new Bank Governor later this year, who may or may not re-confirm Mario Draghi's statement from July 2012: ***"Within our mandate, the European Central Bank is ready to do whatever it takes to preserve the Euro. And believe me, it will be enough."***

The recent macroeconomic conditions of rising interest rates and above target inflation in 2018 were not ideal for Fixed Interest securities such as **gilts and Corporate Bonds**. However, 2019 has seen recovery from these assets. **High yield bonds** have low default rates and their progress is linked more to the economic cycle.

Time in the market, rather than timing the market, is often the key to successful long-term investing. **If you sell today, then when do you buy back?** We believe investments should be held for the medium to long-term. Portfolios are generally spread and so not overexposed to one asset class. Falls and rises are part of investing and falls only turn into losses if you sell out. If you remain a medium to long term investor, whose attitude to risk and circumstances have not changed **it is not advisable generally to alter a diversified portfolio because of short term volatility:**

- JP Morgan has published data on returns from the FTSE All Share from the beginning of 1999 to the end of 2018, which shows the effect of short term volatility.
- The effect of missing out on the **ten best days** in the market is that **returns are cut by two thirds from 5.1% per annum to 1.7% per annum**. Missing the best thirty days makes returns negative at -2.1%.
- In particular, JP Morgan found that six of the best days in the market occurred within two weeks of the ten worst days.
- Therefore, consistently timing the market whether out or in is incredibly difficult. Nobel Laureate William Sharpe found that 'market timers' must be right **82%** of the time to match the return realised by long term investors.
- This underpins our belief that investments should be held for the medium to long-term. Since 1899 the UK stockmarket has outperformed cash in 75% of five year periods and 90% of ten year periods.

***An increase in yield means a fall in capital.**

Issued: 1 July 2019. Expires: 2 August 2019.
