

March 2020 Investment Commentary

Expect the unexpected: At the start of the year we had not heard of the COVID-19 Coronavirus, which originated in China. Financial markets hate the unknown. There have been significant stockmarket falls in the past month, as fears concerning economic growth and corporate profitability have risen, in light of the spread of the virus around the world and measures needed to stop widespread infection.

Why most people do not need to take action:

Time in the market, rather than timing the market, is often the key to successful long-term investing. **If you sell today, then when do you buy back?** We believe investments should be held for the medium to long-term. Portfolios are generally spread and so not overexposed to one asset class and this means you are highly unlikely to be fully invested in shares. As a result, **headline media falls are very unlikely to be the falls experienced within your portfolio.**

If you remain a medium to long term investor, whose attitude to risk and circumstances have not changed **it is not advisable generally to alter a diversified portfolio because of short term volatility:**

- JP Morgan published data on returns from the FTSE All Share from the beginning of 1999 to the end of 2018, which shows the effect of short term volatility.
 - The effect of missing out on the **ten best days** in the market is that **returns are cut by two thirds from 5.1% per annum to 1.7% per annum.** Missing the best thirty days makes returns negative at -2.1%.
 - In particular, JP Morgan found that six of the best days in the market occurred within two weeks of the ten worst days.
- Therefore, consistently timing the market whether out or in is incredibly difficult. Nobel Laureate William Sharpe found that 'market timers' must be right **82%** of the time to match the return realised by long term investors.
- This underpins our belief that investments should be held for the medium to long-term. Since 1899 the UK stockmarket has outperformed cash in around 75% of five year periods and around 90% of ten year periods.

Who needs to take action, and if so, what action:

- **Investment risk** refers to the range of possible returns, with the greater risk taken leading to the greater range of returns both positive and negative. If you feel your risk tolerance might have changed, or you want us to check the ongoing suitability of the portfolio based on your risk tolerance, please ask us for a **fresh Risk Profile Questionnaire.**
- If you a short-term investor, which means you are **approaching taking benefits from your pension, or have a known or emerging need to take a capital withdrawal** from your investments or pensions, you need to contact us so we can assess your options.
- If you take **fixed regular withdrawals** from your accounts, sharp market movements are to be avoided and in time it might be necessary to review the ongoing sustainability of these payments.

In light of the mitigation steps imposed by its Government, the Official Chinese Purchase Managers Index (PMI) declined to an all time low in February 2020, indicating economic contraction.

Deleveraging and dealing with bad debt continues to be required, as does an easing of tensions in Hong Kong.

The decisive UK general election result means that the UK has left the European Union. The EU-UK trade deal has to be negotiated by the end of 2020 to avoid a hard trade exit. This needs to be watched carefully as it may lead to volatility if negotiations falter or fail. In the meantime, the Conservative manifesto will be implemented and the 2020 Budget on 11 March is awaited.

In addition, UK investors must not overlook macroeconomic conditions in the USA, as well as the US Presidential election in November. Historically, US market volatility has been higher in election years. The US Federal Reserve has cut US interest rates, owing to weaker than expected economic growth. Looser monetary policy will be needed as a response to the current issues. Trump may need a successful outcome to ongoing US-China trade negotiations as part of a successful re-election. Nevertheless, all it takes is an incendiary tweet from Trump to lead to market convulsions.

Index / Asset Class	Return Period	Change
FTSE 100 (UK shares)	Year to 29 February 2020	-7.4%
<p>The chart displays the FTSE 100 index value over time. The x-axis marks months from April 2019 to February 2020. The y-axis shows index values from 6,359.41 to 7,686.61. The index starts around 6,800 in April 2019, rises to a peak of approximately 7,600 in late 2019, and then experiences a sharp decline to around 6,400 by February 2020.</p>		
FTSE 100	Rise from post financial crisis trough (6 March 2009)	87.7%
FTSE 100	Fall from most recent peak (22 May 2018)	-16.5%
S&P 500 (US shares)	Year to 29 February 2020	5.4%
Nikkei 225 (Japanese shares)	Year to 29 February 2020	-2.1%
Hang Seng (Hong Kong shares)	Year to 29 February 2020	-9.3%
UK CPI (inflation)	Year to January 2020	1.8%
UK GDP (economic growth)	Q4 2019	0%
UK 10 year Gilt	Yield change year to 29 February 2020	-71.8%*
UK 10 year Gilt	Yield change month to 29 February 2020	-58.0%*
Residential Property (Nationwide House Price Index)	Year to February 2020	2.3%
Residential Property (Nationwide House Price Index)	Rise from pre financial crisis peak October 2007	16.2%
Gold	Fall from peak September 2011 to 29 February 2020	-15.3%

*An increase in yield means a fall in capital.

Issued: 2 March 2020. Expires: 1 April 2020.
